CURRENT POSITION

November 2015- Now: **Postdoctoral researcher** ([page personnelle](#))

Section of Biostatistics, University of Copenhagen
Øster Farimagsgade 5, 1014 Copenhagen, Danemark

Neurobiology Research Unit
Copenhagen University Hospital, Rigshospitalet
Building 6931, Blegdamsvej 9, DK-2100 Copenhagen, Denmark

Mon research work is organized around three topics:

- the development of **latent variable models** for the analysis of complex data (software `lavaSearch2`). I apply these developments on neuroimaging data and data from psychological tests to investigate the relationship between the brain response and depression.
- the analysis of registry data with **time to events outcomes** and **competing risks** (logiciel `riskRegression`). My developments have, for instance, been applied to compare preventive stroke treatments using the danish registry data.
- the development of **generalized pairwise comparisons** to handle multiple and heterogenous outcomes (logiciel `BuyseTest`). A typical application is the assessment of new chemotherapy where being able to balance the benefit (longer in survival time) and the risk (treatment side effects) in an interpretable way is important.
